Reflection Paper			
Topic:	Introduction to Cybersecurity	Week No.	
Course Code:	ITEP 311	Term:	
Course Title:	Introduction to Information Assurance and Security	Academic Year:	2021-2022
Student Name	Kobie Oracion	Section	3C-WAM
Due date	July 15, 2022 (11:59 pm)	Points	

Directions: Make a reflection paper stating what you have learned from the online course and how relevant Cybersecurity is in today's time. DOWNLOAD and PASTE your badge as well as the as the SCREEN SHOT stating that you have finished the course with your NAME and DATE issued on it.

Cybersecurity is important because it safeguards our data and privacy by using the internet safe from cyber attackers such as hackers, that wants to steal information and use it to their own advantage. Hackers can access our personal footprint such as, browsing history, payment information, personal information and more if left unsecured in private or public places.

These events can be avoided by having advance cyber defense programs and software in our devices at all cost. This software protects our devices and all of our information from hackers and other instances, viruses.

Having basic security and knowledge on scams and hacking methods also counts as cybersecurity, thru personal awareness. This can prevent unwanted attacks and security breaches especially in private companies, which can result in massive data breaches and lawsuits.
